

Statistics of the Most Recent Conferences Organized by The International Institute of Informatics and Systemics (IIS, www.iss.org)

The following tables are copied from the Forewords of the respective Proceedings

All the following tables are related to submissions that were peer reviewed by the two-tier reviewing methodology of the International Institute of Informatics and Systemics (IIS, www.iis.org). As it might be noticed, from the table below, in WMSCI 2020 and its collocated events (2020 Summer Conference) **6.70 reviews were made, in average**, for each submission we received. The names of the reviewers have been always included in the respective proceedings. After the conference is over, the names of the reviewers, of each conference are published on the IIS web site *along with the titles of the papers each reviewer reviewed*. This means that what had been a double-blind review, up to the conference, is transformed to single-blind review, when the conference is over. In this way, each author would have information about the names of the reviewers of his/her submission, but not vice-versa. Likewise, each author would know how many reviewers reviewed his/her submission and relate it to the average, which is 6.70 for WMSCI 2020 and its collocated events.

Our two-tier reviewing methodology meet two different objectives of peer-review: 1) to improve the paper via non-anonymous reviewers (non-blind reviews) and 2) to improve the acceptance/non-acceptance decision of the Organizing Committee via traditional anonymous reviewers (double-blind reviews) A recommendation to accept, made by non-anonymous reviews, is a *necessary* condition, but it is *not a sufficient* one. A submission, to be accepted, should also have a majority of its double-blind reviewers recommending its acceptance. These two necessary conditions generate a more reliable and rigorous reviewing than any of those reviewing methods, based on just one of the indicated methods, or just on the traditional double-blind reviewing. *More details with regards to this two-tier reviewing methodology have been posted at <http://iis.org/peer-reviewing.asp>. Our acceptance policy is based on this two-tier reviewing methodology. The described dual reviewing methodology and acceptance policy have been published in the respective conferences web sites since 2006 and generated the following statistics.*

WMSCI 2020 and its Collocated Events (2020 Summer Conference)

Conference	# of submissions received	# of reviewers that made at least one review	# of reviews made	Average of reviews per reviewer	Average of reviews per submission	# of papers included in the proceedings	% of submissions included in the proceedings
